INSTANT RECALL

INSTANT RECALL - an electronic filing system

If you use an address book or a card index you're already using a simple type of database (that's computer jargon for a filing system). INSTANT RECALL allows you to harness the power of your computer to store a vast amount of information and access any part of it in an instant - yet it's as easy to use as that old-fashioned card index!

When you've finished entering or updating information you can store it on tape or disk. With a printer you can print out information from selected records to create a report or a batch of address labels.

INSTANT RECALL can be used in the home or at work, and if you help to run a club or society you'll find it particularly useful. You'll be amazed that such a powerful program is so easy to use!

SUPERSOFT, who are based in North West London, have been writing programs for micro computers since 1978.
